

## **Approval of insecticides, attractants, and repellents**

The Biocidal Products Committee (BPC) intends to decide on approval or non-approval for the following active substances, which are under review for product types 18 and 19, before the end of this year. These include:

- Chlorfenapyr, product type 18, decision planned for June 2018
- Icaridin, product type 19, decision planned for October 2018
- Metofluthrin, product type 19, decision planned for December 2018
- d-Allethrin, product type 18, decision planned for December 2018
- Esbiothrin, product type 19, decision planned for December 2018

Are you a manufacturer or distributor of an insecticide or repellent based on one of these active ingredients? Do you want to be sure that your product remains legally compliant in the EU market? After the decision on WS approval has been announced, you have about two years to market your product in the EU member states under the so-called transitional regulation, but the requirements of the countries differ greatly - ask us about the regulations and possibilities in individual countries. The transitional regulation may also be used for a further 3 years if an application for product approval is submitted within these 2 years. We can also advise you on strategies for cost-optimised authorisation of your biocidal product under the BPR.

Contact us ([biocides@cfcconsult.onmicrosoft.com](mailto:biocides@cfcconsult.onmicrosoft.com)) - we will work out the best options for your biocidal product.
